ENTORNO DE DESARROLLO JAVA

Me he descargado HomeBrew para ayudar con la instalación.

1. Descarga de Java 17

```
[(base) allende@MacBook-Pro-de-Allende learning-js % java --version

OpenJDK Runtime Environment Temurin-17.0.6+10 (build 17.0.6+10)
OpenJDK 64-Bit Server VM Temurin-17.0.6+10 (build 17.0.6+10, mixed mode)
```

2. Descarga de Maven

```
[(base) allende@MacBook-Pro-de-Allende Desktop % sudo install homebrew
[Password:
usage: install [-bCcpSsv] [-B suffix] [-f flags] [-g group] [-m mode]
               [-o owner] file1 file2
       install [-bCcpSsv] [-B suffix] [-f flags] [-g group] [-m mode]
               [-o owner] file1 ... fileN directory
       install -d [-v] [-g group] [-m mode] [-o owner] directory ...
[(base) allende@MacBook-Pro-de-Allende Desktop % /bin/bash -c "$(curl -fsSL https://raw.githubusercontent
.com/Homebrew/install/HEAD/install.sh)"
==> Checking for `sudo` access (which may request your password)...
==> You are using macOS 11.4.
==> We (and Apple) do not provide support for this old version.
This installation may not succeed.
After installation, you will encounter build failures with some formulae.
